Public Information Summary

Host Country(ies)

Romania

Name of Counterparty / Issuer

RoPower Nuclear S.A.

Project Description

Project Development ("***PD***") funding in the amount of One Hundred and Fifty Thousand U.S. Dollars ($150,000) will be provided as a reimbursable grant from DFC to RoPower Nuclear S.A. ("***RoPower***" or "***Project Company***") to prepare for DFC's potential equity investment in a RoPower Project.

The Project will consist of RoPower developing, building, and owning and operating the Doicești small modular reactor (SMR) nuclear energy project in Romania, consisting of six NuScale Power Modules, each with an individual capacity of 77 megawatts (MW), and a combined capacity of 462 MW. The Project will potentially be a first of a kind once it reaches commercialization, providing dispatchable nuclear energy to the electric power grid.

The PD work will take place over approximately three months and will include completion of a detailed commercial feasibility study for the Project. The Study will include a detailed analysis of (i) the business model for the Project, and (ii) the market for electricity that would be supplied by the Project within Romania and, potentially, the region. The Study will also analyze and provide commentary on the reasonableness of the underlying assumptions driving the business results, and the viability of, and risk factors inherent in, the business plan.
