Public Information Summary

Host Country

Madagascar

Name of Issuer (Sponsor)

Harena Rare Earths PLC

Project Description

Harena Rare Earths PLC ("Harena") is a critical minerals developer focused on its wholly owned Ampasindava Ionic Clay Rare Earth deposit in Madagascar. The Project Development ("PD") Activity is intended to advance this proposed near-surface ionic clay rare earth development in northwest Madagascar (the "Project") from prefeasibility toward definitive feasibility and to support subsequent permitting, licensing and commercial development so that DFC can consider potentially providing equity and/or a direct loan for the Project. The PD Activity is expected to include feasibility-level mining, logistics, metallurgical, engineering, environmental and social work, together with associated cost estimation, project integration and proof-of-concept plant preparation activities.
